we need to create stem research for GGTC Gabriel Global Technical Corporation on March 31st 2026 GGTC.info Quibhoball.com and GGTCUNIVERSE.com on the header for me and create

Created the document.

It includes the header with:

- GGTC Gabriel Global Technical Corporation
- March 31, 2026
- GGTC.info
- Quibhoball.com
- GGTCUNIVERSE.com

If you want, I can next turn this into a longer formal research packet or a branded cover version.

If you want, I can next turn this into a longer formal research packet or a branded cover version.

Understood. I'll move this forward into a **formal STEM research packet with a branded structure**. Below is a clean, expandable framework you can use immediately, plus a drafted front section.

---

# GGTC STEM RESEARCH PACKET (STRUCTURE)

## 1. Cover Page (Branded)

**Header (already included):**

- GGTC Gabriel Global Technical Corporation
- March 31, 2026
- GGTC.info | Quibhoball.com | GGTCUNIVERSE.com

**Title:**

**Optional Subheading:**

A multi-domain research framework across cybersecurity, infrastructure systems, and applied technical innovation

---

## 2. Executive Summary

**Purpose:**

A concise overview of what GGTC is researching and why it matters.

**Draft:**

GGTC (Gabriel Global Technical Corporation) is developing a structured STEM research initiative focused on integrated systems architecture, cybersecurity, infrastructure design, and educational alignment. This initiative operates as a multi-domain framework intended to support long-horizon technical development, institutional-grade systems thinking, and scalable knowledge infrastructure.

The research aligns with GGTC's operational model, emphasizing structured data, layered governance, and controlled system expansion. Domains include cybersecurity, digital infrastructure, applied mathematics, systems engineering, and emerging technical ecosystems connected to GGTC.info, Quibhoball.com, and GGTCUNIVERSE.com.

---

## 3. Research Objectives

- Establish a **STEM-aligned research foundation** within GGTC
  - Develop **cybersecurity and infrastructure frameworks**
  - Support **educational pathways** tied to real-world systems
  - Create **scalable technical architectures**
  - Maintain **structured documentation and archival integrity**
- 

## 4. Core Research Domains

### 4.1 Cybersecurity

- Network security architecture
- Threat modeling and system resilience
- Access control systems and data protection

## 4.2 Systems Architecture

- Layered system design (governance, technical, operational)
- Infrastructure modeling
- Interconnected system frameworks

## 4.3 Infrastructure & Engineering

- Digital infrastructure systems
- Platform integration (GGTC ecosystem sites)
- Scalable deployment models

## 4.4 Applied STEM Education

- Curriculum-aligned technical content
- Practical system-based learning
- Integration with publishing (GGTCPUBLISHING)

## 4.5 Data & Knowledge Systems

- Structured data archiving (library-first model)
- Information classification and retrieval systems
- Long-term knowledge preservation

---

## 5. GGTC Platform Integration

| Platform                | Role in Research                                      |
|-------------------------|-------------------------------------------------------|
| <b>GGTC.info</b>        | Core corporate and systems hub                        |
| <b>Quibhoball.com</b>   | Conceptual / system extension layer (defined by user) |
| <b>GGTCUNIVERSE.com</b> | Expanded ecosystem and narrative-linked systems       |

*(No assumptions added beyond naming—structure remains open per your rules.)*

---

## 6. Methodology

- Structured documentation and version control
  - Incremental system development (no assumed timelines)
  - Controlled expansion of research domains
  - Integration of real-world and conceptual system models
-

## 7. Output & Deliverables

- Research papers (JP Johnson Publishing / GGTC PUBLISHING)
  - System architecture models
  - Educational modules
  - Technical documentation archives
- 

## 8. Future Expansion (Intentionally Open)

This section remains undefined until explicitly specified.

---

## Next Step Options

Choose one direction and I'll build it out fully:

### Option A — Full Formal Paper

- 10–20 page academic-style research document
- Proper sections (abstract, literature-style framing, citations style if needed)

### Option B — Branded PDF / Presentation

- Visual cover
- Clean institutional layout
- Ready for publishing or sharing

### Option C — Website-Ready Version

- Structured for GGTC.info
- Sectioned HTML-style content

### Option D — Hybrid (Recommended)

- Formal research doc + branded cover + web version
- 

If you want, I can also:

- Integrate your uploaded visuals into the cover
- Add a **GGTC seal / insignia layout**
- Format this into a **publish-ready DOCX or PDF**

Just specify which direction.

previously i used to say no to the html but now i can actually use it so yes please

The HTML page is set up in canvas as a web-ready file.

It includes:

- the branded header
- the March 31, 2026 date
- GGTC.info, Quibhoball.com, and GGTCUNIVERSE.com
- a formal STEM research layout with sections for summary, objectives, domains, methodology, platform integration, and outputs

Next I can convert this into a more homepage-style landing page or make it match a stricter institutional/corporate visual style.

Next I can convert this into a more homepage-style landing page or make it match a stricter institutional/corporate visual style.

Ggtc Stem Research Page· html

```
<!DOCTYPE html>

<html lang="en">

<head>

<meta charset="UTF-8" />

<meta name="viewport" content="width=device-width, initial-scale=1.0" />

<title>GGTC STEM Research Initiative</title>

<style>

:root {

--bg: #09111f;

--bg-2: #0f1a2e;

--panel: #101a2b;

--panel-2: #13213a;

--text: #eef3ff;

--muted: #b7c3dc;
```

```
--line: #263656;

--accent: #8fb8ff;

--accent-soft: rgba(143, 184, 255, 0.12);

--max: 1180px;

}
```

```
* { box-sizing: border-box; }
```

```
html { scroll-behavior: smooth; }
```

```
body {

margin: 0;

font-family: Inter, Arial, Helvetica, sans-serif;

color: var(--text);

background:

radial-gradient(circle at top right, rgba(143, 184, 255, 0.12), transparent 28%),

linear-gradient(180deg, var(--bg) 0%, var(--bg-2) 100%);

line-height: 1.6;

}
```

```
a {

color: inherit;
```

Updated.

The page now reads as a **homepage-style institutional landing page** with:

- a stricter corporate header/navigation
- a more formal hero section
- cleaner research-domain blocks

- platform alignment cards
- methodology and deliverables sections
- a more controlled institutional visual style overall

The next useful step is to add your actual GGTC imagery or logo treatment into the hero/header so it matches your existing branding more closely.

where do i input this in the application on wordpress

You have a few clean ways to use this in **WordPress**, depending on how your site is set up. I'll give you the most reliable options, starting with the simplest.

---

## Option 1 — Use a “Custom HTML” Block (Fastest)

Best if you're using Gutenberg (default WordPress editor).

### Steps:

1. Go to your WordPress dashboard
2. Click **Pages** → **Add New** (or edit an existing page)
3. In the editor:
  - Click “+” (**Add Block**)
  - Search for “**Custom HTML**”
4. Paste the **HTML code inside that block**
5. Click **Preview** → **Preview in new tab**
6. If it looks correct → click **Publish**

### Important:

- **Remove this part before pasting:**

```
<!DOCTYPE html>
<html>
<head> ... </head>
<body>
```

➡ Only paste **everything inside <body> ... </body>**

---

## Option 2 — Use a Page Builder (Elementor, etc.)

If you're using Elementor or similar:

### Steps (Elementor example):

1. Edit page → **Edit with Elementor**
  2. Drag in an **HTML widget**
  3. Paste your code
  4. Update page
- 

## Option 3 — Full Page Template (Advanced / Cleanest)

Best if you want this as a **true standalone branded page**

### Steps:

1. Go to:
  - **Appearance → Theme File Editor**

2. Create a new file like:

page-ggtrc-stem.php

3. Paste full HTML but wrap it in WordPress structure:

```
<?php get_header(); ?>
<!-- your HTML body content here -->
<?php get_footer(); ?>
```

4. Save
  5. Go to your page → assign this template
- 

## Option 4 — Upload as Static Page (Most Controlled)

If you want **exact design control (no theme interference)**:

1. Save the file as:

index.html

2. Upload via:

- **Hosting (cPanel / FTP)**
- or WordPress File Manager plugin

3. Place it in:

/public\_html/ggtc-stem/

4. Visit:

yourdomain.com/ggtc-stem/

---

## Common Issues (Important)

### 1. Styles not working?

WordPress may strip <style> tags.

Fix:

- Use **Custom HTML block**, not Paragraph
  - Or move CSS to:  
**Appearance → Customize → Additional CSS**
- 

### 2. Page looks “boxed” or off

Your theme is overriding layout.

Fix:

- Set page template to:
    - **Full Width**
    - or **Canvas (Elementor)**
- 

### 3. Header conflicts

If you see double headers:

- Remove your custom header OR
  - Use a **Blank / Canvas template**
-

# Recommended Setup (For You)

Given what you're building with GGTC:

→ Use **Option 1 (Custom HTML) + Full Width page**

Then later:

→ Upgrade to **custom template (Option 3)** when you want full control

---

If you want next step, I can:

- Convert this into a **WordPress-ready version (no stripping issues)**
- Or adapt it specifically for **Elementor / Astra / Kadence / whatever theme you're using**

Just tell me your theme 👍

Convert this into a WordPress-ready version (no stripping issues)

Ggtc Stem Wordpress Ready· html

```
===== -->
```

```
margin: 0;
```

```
color: var(--ggtc-muted);
```

```
max-width: 60ch;
```

```
}
```

```
@media (max-width: 1100px) {
```

```
#ggtc-stem-page .ggtc-stats-grid,
```

```
#ggtc-stem-page .ggtc-deliverables-grid {
```

```
grid-template-columns: repeat(2, minmax(0, 1fr));
```

```
}
```

```
}
```

```
@media (max-width: 900px) {
```

```
#ggtc-stem-page .ggtc-hero-shell,
```

```
#ggtc-stem-page .ggtc-card-grid,  
#ggtc-stem-page .ggtc-platform-grid {  
  grid-template-columns: 1fr;  
}
```

```
#ggtc-stem-page .ggtc-hero-sites {  
  grid-template-columns: 1fr;  
}
```

```
#ggtc-stem-page .ggtc-topbar-inner,  
#ggtc-stem-page .ggtc-cta-panel,  
#ggtc-stem-page .ggtc-section-heading {  
  align-items: flex-start;  
  flex-direction: column;  
}
```

```
#ggtc-stem-page .ggtc-nav {  
  justify-content: flex-start;  
}  
}
```

```
@media (max-width: 640px) {  
  #ggtc-stem-page .ggtc-stats-grid,  
  #ggtc-stem-page .ggtc-deliverables-grid {  
    grid-template-columns: 1fr;  
  }  
}
```

```
#ggtc-stem-page .ggtc-hero-main,  
  
#ggtc-stem-page .ggtc-hero-side,  
  
#ggtc-stem-page .ggtc-section-card,  
  
#ggtc-stem-page .ggtc-cta-panel {  
  
padding: 22px;  
  
}
```

```
#ggtc-stem-page h1 {  
  
max-width: none;  
  
}  
  
}
```

Done.

I converted it into a **WordPress-ready split version** in canvas:

## What changed

- **HTML is separate** for a **Custom HTML block**
- **CSS is separate** for **Appearance → Customize → Additional CSS**
- No `<html>`, `<head>`, `<body>`, or `<style>` wrappers inside the page content
- All styling is scoped under `#ggtc-stem-page` to reduce theme conflicts

## Where to paste each part

### In WordPress page editor

- Add a **Custom HTML** block
- Paste only the **HTML FOR WORDPRESS PAGE BLOCK** section

### In WordPress customizer

- Go to **Appearance → Customize → Additional CSS**
- Paste only the **CSS FOR WORDPRESS ADDITIONAL CSS** section

## Best page settings

Use one of these if your theme supports it:

- **Full Width**
- **Canvas**
- **No Sidebar**

That avoids boxed layouts and double styling from the theme.

## Important

Do **not** paste the CSS into the HTML block.

Do **not** paste the HTML into Additional CSS.

The next practical step is to make you a version specifically tuned for your WordPress theme so spacing and width match exactly.

## Operational Context

Creation of a WordPress-ready STEM research page aligned with GGTC systems architecture.  
Transition from document-based structure to **web deployment + repository preparation**.

## Integrity Status

- STRUCTURE VERIFIED
- NO EXTERNAL DEPENDENCIES INTRODUCED
- NETWORK CONSISTENCY MAINTAINED

## Notes

- Author defined: **Ethan Brooks · Technical SEO Analyst, GGTC Systems**
- Focus: crawlability, indexing, visibility recovery, and structural SEO integrity
- HTML successfully converted to WordPress-compatible format
- Preparing repository for version control and deployment tracking

## Next Action

- Create GitHub repository
  - Upload HTML + CSS assets
  - Add README and structure documentation
  - Link repo into GGTC ecosystem workflow
- 

## GITHUB REPOSITORY NAME

GGTC\_INFO\_STEM\_RESEARCH\_WEB\_PAGE\_V000

---

## COMPACT DESCRIPTION

GGTC STEM Research web page (WordPress-ready) including structured HTML, scoped CSS, and system-aligned architecture for GGTC.info ecosystem deployment and SEO integration.

---

## README.md

```
# GGTC_INFO_STEM_RESEARCH_WEB_PAGE_V000
## Overview
This repository contains the GGTC STEM Research web page prepared for deployment within the GGTC ecosystem.
The page is structured for:
- WordPress compatibility
- SEO visibility and crawlability
- Clean system architecture alignment
## System Context
Platform: GGTC.info
Date: April 28, 2026
Time: 07:00 (GGTC.info Time)
## GGTC Network
- GGTC.info
- Quibhoball.com
- GGTCMULTIMULTIVERSE.com
- GGTC.AI.com
- GGTC TRAINING.com
```

```
- GGTCUBLISHING.com
- GGTCGLOBALMEDIA.com
- GGTCUNIVERSE.com
- GGTCQuantumkids.org
- GGTCSTEMTRAINING.com
- GGTCGLOBALAI.com
## Structure
This repository includes:
- WordPress-ready HTML (Custom HTML block compatible)
- Scoped CSS for theme-safe styling
- Institutional research layout
## Author
Ethan Brooks
Technical SEO Analyst, GGTC Systems
Ethan Brooks specializes in:
- Crawlability optimization
- Search engine indexing
- Technical SEO structure
- Visibility restoration through proper linking and architecture
## Contact
- operations@ggtc.info
- Quibhoball@TikTok
- GGTC_operations@twitter
- Facebook (Meta) – in progress
## Purpose
To provide a structured STEM research page that integrates:
- Systems architecture
- Cybersecurity framing
- Infrastructure design concepts
- Educational alignment
## Workflow Role
This repository functions as:
- Version-controlled web asset
- Deployment-ready structure for WordPress
- Part of GGTC publishing and ecosystem pipeline
## Status
ACTIVE – INITIAL VERSION (V000)
## Notes
No assumptions beyond defined system structure have been introduced.
Future expansion requires explicit definition within GGTC framework.
```

---

If you want next step, I can:

- generate the **actual repo folder structure (files layout)**
- or prepare a **Git commit script / upload sequence**
- or connect this directly to your **WordPress deployment workflow**

actual repo folder structure (files layout)

## Repo Folder Structure

GGTC\_INFO\_STEM\_RESEARCH\_WEB\_PAGE\_V000/

```
|
|— README.md
|— LICENSE_NOTICE.md
```

## File Purpose

| File / Folder     | Purpose                                       |
|-------------------|-----------------------------------------------|
| README.md         | Main repository overview                      |
| LICENSE_NOTICE.md | All Rights Reserved / copyright notice        |
| CHANGELOG.md      | Version history                               |
| repo_manifest.md  | File index and repo purpose                   |
| wordpress/        | WordPress-ready deployment files              |
| src/              | Standalone HTML/CSS source version            |
| docs/             | Supporting documentation and logbook material |

## Recommended First Upload

Start with these files first:

README.md  
LICENSE\_NOTICE.md  
CHANGELOG.md  
wordpress/custom-html-block.html  
wordpress/additional-css.css  
docs/logbook-entry-2026-04-28-0700.md

# Compact Commit Message

Initial V000 STEM research WordPress page structure

Git commit script / upload sequence

## Git Commit Script / Upload Sequence

Use this from inside the repo folder:

```
cd GGTC_INFO_STEM_RESEARCH_WEB_PAGE_V000
git init
git add README.md
git add LICENSE_NOTICE.md
git add CHANGELOG.md
git add repo_manifest.md
git add wordpress/custom-html-block.html
git add wordpress/additional-css.css
git add wordpress/wordpress-install-notes.md
git add src/index.html
git add src/styles.css
git add docs/logbook-entry-2026-04-28-0700.md
git add docs/author-profile-ethan-brooks.md
git add docs/ggtc-network.md
git add docs/deployment-notes.md
git add assets/images/README.md
git add assets/logos/README.md
git add assets/screenshots/README.md
git add archive/v000/original-working-draft.md
git add archive/v000/wordpress-ready-copy.md
git status
git commit -m "Initial V000 STEM research WordPress page structure"
git branch -M main
```

## GitHub Upload Sequence

After creating the GitHub repo named:

GGTC\_INFO\_STEM\_RESEARCH\_WEB\_PAGE\_V000

Run:

```
git remote add origin
https://github.com/YOUR-USERNAME/GGTC_INFO_STEM_RESEARCH_WEB_PAGE_V000.git
git push -u origin main
```

## If You Already Initialized Git Before

Use:

```
git status
git add .
git commit -m "Update V000 STEM research WordPress page structure"
```

git push

# Recommended First Commit Message

Initial V000 STEM research WordPress page structure

WordPress deployment workflow

## WordPress Deployment Workflow

### 1. Prepare repo files

Use these two files:

wordpress/custom-html-block.html  
wordpress/additional-css.css

---

### 2. Create WordPress page

In WordPress:

Dashboard → Pages → Add New

Recommended page title:

GGTC STEM Research

Recommended slug:

ggtc-stem-research

---

### 3. Set page layout

In page settings, choose one if available:

Full Width  
Canvas  
No Sidebar  
Blank Page

Best option: **Full Width** or **Canvas**.

---

## 4. Add HTML

In the page editor:

+ Add Block → Custom HTML

Paste contents of:

`wordpress/custom-html-block.html`

Then click:

Preview

---

## 5. Add CSS

Go to:

Appearance → Customize → Additional CSS

Paste contents of:

`wordpress/additional-css.css`

Then click:

Publish

---

## 6. Publish page

Return to the page editor.

Click:

Publish

Expected URL format:

`https://ggtc.info/ggtc-stem-research/`

---

## 7. Add internal links

Add the new page link to:

`GGTC.info`

`Quibhoball.com`

`GGTCUNIVERSE.com`

`GGTCPUBLISHING.com`

`GGTCSTEMTRAINING.com`

---

## 8. Update repo after deployment

Create this file:

docs/wordpress-deployment-log-2026-04-28-0700.md

Commit message:

Add WordPress deployment workflow for GGTC STEM research page

Git commands:

```
git add docs/wordpress-deployment-log-2026-04-28-0700.md
git add wordpress/custom-html-block.html
git add wordpress/additional-css.css
git commit -m "Add WordPress deployment workflow for GGTC STEM research page"
git push
```

---

## Deployment status label

DEPLOYMENT READY — WORDPRESS CUSTOM HTML + SCOPED CSS
